

Final Report
Space Physics Data Markup Language
Principal Investigator: Daniel Morrison

This report summarizes our activity on our NASA SR&T grant, “Space Physics Data Markup Language”, NAG5-9432. In this AISRP we developed the Space Physics Data Markup Language (SPDML) which is an XML description language for the metadata for space physics datasets. We have developed a demonstration system using an ORACLE 9i database which contains SPDML metadata from the SuperDARN radar network, solar and geophysical indices, and instrument metadata from the TIMED spacecraft.

The metadata from the TIMED instruments is specialized and includes remote sensing field-of-view information. This allows highly evolved data queries such as “What data is available when the GUVI instrument on TIMED was observing the auroral oval and the SuperDARN radars were operating while the Kp index was greater than 5 at night?” These specialized queries are completely beyond the capability of current catalog systems available in space physics today and even exceed the capabilities of proposed future Virtual Observatories in the Sun-Earth-Connections environment. There are three important elements that have been developed under this grant which are illustrated below:

Step 1 - Data Dictionaries

Widely disparate data sources that are remotely located make it very difficult for the user to find cross-mission data sets. SPDML provides a standard for expressing Space Physics metadata. It is based on SPASE, and has commonality with the VSPO data dictionary as well as other relevant Space Physics data dictionaries. Standards are the only way to make heterogeneous data sets accessible via a single and homogeneous manner.

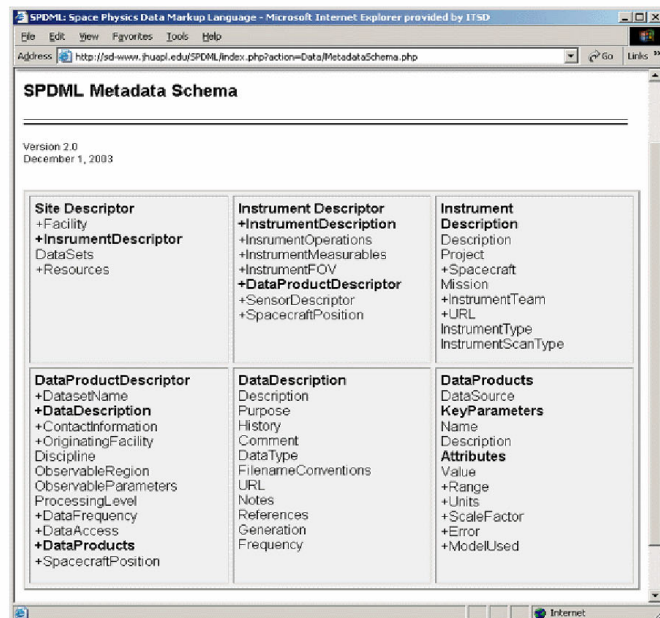

Step 2 - Data Product Registry

The SPDML User Interface can only query on known Space Physics Data sets. To make a data product available, it must be registered with the SPDML Data Product Registry. The registry provides the means to identify and register all relevant data sets and associated data products and identifies the items in a data set that describe:

- a mission
- a spacecraft
- an experiment
- an instrument
- a data product
- physical discipline
- key parameters
- observable regions

In addition, the data sets will be characterized by the following attributes:

- instrument type
- coverage time
- location of observation
- time
- solar zenith angle
- observed regime
- environmental characterizations

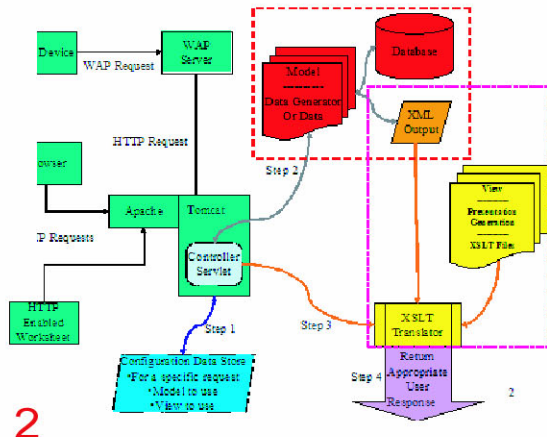

Step 3 - Query Interface

The Query Interface receives a set of user's input choices from the User Interface and assembles them into a complex query utilizing the information structure identified in the Data Product Registry. For our initial prototype, we are using Oracle 9i for the Query Interface.

```

SELECT
  extractvalue(VALUE(x), '//Name') as 'Name',
  extractvalue(VALUE(x), '//URL') as 'URL',
  extractvalue(VALUE(x), '//DataProduct') as 'DataProduct'
FROM SPDML_X
WHERE (extractvalue(VALUE(x), '//Spacecraft') = 'TIMES'
      OR
      extractvalue(VALUE(x), '//Spacecraft') = 'DesundBenedict')
AND (extractvalue(VALUE(x), '//Instrument') = 'JSTI'
     OR
     extractvalue(VALUE(x), '//Instrument') = 'SuperJAW')
AND extractvalue(VALUE(x), '//InstrumentMode') = 'Imaging'
AND extractvalue(VALUE(x), '//ObservableRegion') = 'Ionosphere'
AND extractvalue(VALUE(x), '//ObservablePhysicalParameters') = 'Density'
     OR
     extractvalue(VALUE(x), '//ObservablePhysicalParameters') = 'Flux'
     OR
     extractvalue(VALUE(x), '//ObservablePhysicalParameters') = 'Radioance' )
AND extractvalue(VALUE(x), '//ProcessingLevel') = 'Derived'
AND extractvalue(VALUE(x), '//KeyParameters') = 'CharacteristicEnergy'
     OR
     extractvalue(VALUE(x), '//KeyParameters') = 'Thomson Potential')
AND extractvalue(VALUE(x), '//StartDate') = '2002-02-05'
AND extractvalue(VALUE(x), '//StartTime') = '00:00:00'
AND extractvalue(VALUE(x), '//StopDate') = '2002-05-05'
AND extractvalue(VALUE(x), '//StopTime') = '23:59:59'

```

The user generates a query utilizing the User Interface which gets sent to the SPDML web server where the request is processed by querying the SPDML registry and database

In addition, for a demonstration system we have developed a user interface that allows you to make these detailed queries, display your results, and see a more detailed view of the metadata that you are searching.

User Interface

Provides a web-based, uniform and easily usable interface through which to query for and download any SPDML registered data sets including physically distributed data sets.

1. Search

SPDML Search Tool

Select one or more parameters to perform your query. The query will be executed against the Selected Query string in the database.

Mission: (select all that apply)
☐ Cassini/Cassini-Huygens
☐ Mars Reconnaissance Orbiter

Spacecraft: (select all that apply)
☐ Mars Reconnaissance Orbiter
☐ Cassini/Cassini-Huygens

Instrument: (select all that apply)
☐ Mars Reconnaissance Orbiter
☐ Cassini/Cassini-Huygens

Instrument Mode: (select all that apply)
☐ Mars Reconnaissance Orbiter
☐ Cassini/Cassini-Huygens

Observable Region: (select all that apply)
☐ Mars Reconnaissance Orbiter
☐ Cassini/Cassini-Huygens

Observable Physical Parameter: (select all that apply)
☐ Mars Reconnaissance Orbiter
☐ Cassini/Cassini-Huygens

Data Product: (select all that apply)
☐ Mars Reconnaissance Orbiter
☐ Cassini/Cassini-Huygens

Processing Level: (select all that apply)
☐ Mars Reconnaissance Orbiter
☐ Cassini/Cassini-Huygens

Key Parameters: (select all that apply)
☐ Mars Reconnaissance Orbiter
☐ Cassini/Cassini-Huygens

Start Date: YYYYMMDD [100-1-1] Stop Date: YYYYMMDD [100-1-1]
 Start Time: HHMMSS [0000] Stop Time: HHMMSS [0000]

Coordinate System: Latitude: Longitude:
 Relative Position: [00000000]

Selected query can be modified here:
 SELECT * FROM SPDML WHERE (MISSION = 'Cassini/Cassini-Huygens' OR MISSION = 'Mars Reconnaissance Orbiter') AND (SPACECRAFT = 'Mars Reconnaissance Orbiter' OR SPACECRAFT = 'Cassini/Cassini-Huygens') AND (INSTRUMENT = 'Mars Reconnaissance Orbiter' OR INSTRUMENT = 'Cassini/Cassini-Huygens') AND (INSTRUMENT_MODE = 'Mars Reconnaissance Orbiter' OR INSTRUMENT_MODE = 'Cassini/Cassini-Huygens') AND (OBSERVABLE_REGION = 'Mars Reconnaissance Orbiter' OR OBSERVABLE_REGION = 'Cassini/Cassini-Huygens') AND (OBSERVABLE_PHYSICAL_PARAMETER = 'Mars Reconnaissance Orbiter' OR OBSERVABLE_PHYSICAL_PARAMETER = 'Cassini/Cassini-Huygens') AND (DATA_PRODUCT = 'Mars Reconnaissance Orbiter' OR DATA_PRODUCT = 'Cassini/Cassini-Huygens') AND (PROCESSING_LEVEL = 'Mars Reconnaissance Orbiter' OR PROCESSING_LEVEL = 'Cassini/Cassini-Huygens') AND (KEY_PARAMETERS = 'Mars Reconnaissance Orbiter' OR KEY_PARAMETERS = 'Cassini/Cassini-Huygens') AND (START_DATE <= '100-1-1' AND STOP_DATE >= '100-1-1') AND (START_TIME <= '0000' AND STOP_TIME >= '0000') AND (COORDINATE_SYSTEM = 'Mars Reconnaissance Orbiter' OR COORDINATE_SYSTEM = 'Cassini/Cassini-Huygens') AND (LATITUDE <= '00000000' AND LONGITUDE >= '00000000') AND (RELATIVE_POSITION <= '00000000')

Query Cancel

Search items selected

Oracle query gets generated here and can also be manually modified here to support additional user criteria

2. Results

SPDML Results

The results of your query are:

Note: You can download or view data for multiple data products by checking the box in the second data product and selecting the 'VIEW' button in the bottom of the list.

Source	Product Type	View	Metadata	URL
SuperCASS	SuperCASS	<input type="checkbox"/>	SuperCASS	http://www.nasa.gov/mission/main/cassini/cassini.html
UMI	UMI	<input type="checkbox"/>	UMI	http://www.nasa.gov/mission/main/umi/umi.html

Selected query can be modified here:
 SELECT * FROM SPDML WHERE (MISSION = 'Cassini/Cassini-Huygens' OR MISSION = 'Mars Reconnaissance Orbiter') AND (SPACECRAFT = 'Mars Reconnaissance Orbiter' OR SPACECRAFT = 'Cassini/Cassini-Huygens') AND (INSTRUMENT = 'Mars Reconnaissance Orbiter' OR INSTRUMENT = 'Cassini/Cassini-Huygens') AND (INSTRUMENT_MODE = 'Mars Reconnaissance Orbiter' OR INSTRUMENT_MODE = 'Cassini/Cassini-Huygens') AND (OBSERVABLE_REGION = 'Mars Reconnaissance Orbiter' OR OBSERVABLE_REGION = 'Cassini/Cassini-Huygens') AND (OBSERVABLE_PHYSICAL_PARAMETER = 'Mars Reconnaissance Orbiter' OR OBSERVABLE_PHYSICAL_PARAMETER = 'Cassini/Cassini-Huygens') AND (DATA_PRODUCT = 'Mars Reconnaissance Orbiter' OR DATA_PRODUCT = 'Cassini/Cassini-Huygens') AND (PROCESSING_LEVEL = 'Mars Reconnaissance Orbiter' OR PROCESSING_LEVEL = 'Cassini/Cassini-Huygens') AND (KEY_PARAMETERS = 'Mars Reconnaissance Orbiter' OR KEY_PARAMETERS = 'Cassini/Cassini-Huygens') AND (START_DATE <= '100-1-1' AND STOP_DATE >= '100-1-1') AND (START_TIME <= '0000' AND STOP_TIME >= '0000') AND (COORDINATE_SYSTEM = 'Mars Reconnaissance Orbiter' OR COORDINATE_SYSTEM = 'Cassini/Cassini-Huygens') AND (LATITUDE <= '00000000' AND LONGITUDE >= '00000000') AND (RELATIVE_POSITION <= '00000000')

Query Cancel

Supports iterative refinement of query results

Download of files that match search criteria

3. View Metadata

SPDML View Metadata

The selected metadata is:

Mission/Spacecraft	Instrument and Mode	Observable Region(s)	Observable Physical Parameter(s)	Data Product	Processing Level	Key Parameters	Date Start Time	Date Stop Time
MAR Ground Level	SuperCASS	Mars Reconnaissance Orbiter	Global Winds	SuperCASS	Derived	Global Winds	2005-03-29 00:00:00	2005-03-29 23:59:59
SuperCASS	SuperCASS	Aurora Region	Flux	SuperCASS	Derived	Flux	2005-03-29 00:00:00	2005-03-29 23:59:59
SuperCASS	SuperCASS	Aurora Region	Flux	SuperCASS	Derived	Flux	2005-03-29 00:00:00	2005-03-29 23:59:59

Extended Metadata
